MADE-TO-MEASURE SEALING

OFFER

Our offer is based on an extensive stock of seals used throughout the broadly understood industry and beyond. Turned seals (made to measure) include: cylinder seals, rotary and piston seals, resistance, guide and scraper rings. All these seals are manufactured by us. We recommend that you familiarize yourself with the dedicated directories created for each group.

CYLINDER SEALS

DESCRIPTION

Cylinder seals are seals made of hard materials of high hardness (NBR, PU, FPM, VMQ, EPDM) measured on the Shore scale. They are used in systems with high pressure and temperature. Thanks to them, the cylinder is protected against external and internal leaks. It also ensures the tightness of the system and maintains the set pressure for the system.

APPLICATION

- hydraulic cylinders
- various types of pistons and rods
- high-pressure hydraulic and pneumatic linear drives

SEALING PROFILES

Our technology allows us to bore seals of various cross-sections, meeting the customer's requirements. The profiles for the cylinder seals are shown below. In order to find out about the exact parameters of the material used, please refer to the table available on the basis of seals in our offer.
