# MADE-TO-MEASURE SEALING

**OFFER**

Our offer is based on an extensive stock of seals used throughout the broadly understood industry and beyond. Turned seals (made to measure) include: cylinder seals, rotary and piston seals, resistance, guide and scraper rings. All these seals are manufactured by us. We recommend that you familiarize yourself with the dedicated directories created for each group.

# ROTARY SEALS

## DESCRIPTION

**Rotary seals** are seals made of hard materials of high hardness (NBR, PU, FPM, VMQ, EPDM) measured on the Shore scale. They are used in systems with high pressure and temperature. Their application is limited to rotating or oscillating device parts.

## APPLICATION

- hydraulic motors
- machines and devices with rotary drives

## SEALING PROFILES

Our technology allows us to bore seals of various cross-sections, meeting the customer's requirements. Profiles for rotary seals are shown below. In order to find out about the exact parameters of the material used, please refer to the table available on the basis of seals in our offer.
